

$m=3$ A. kubiczna

Wykres danych

x_i	y_i	x_i	y_i
0.00	0.486	0.55	1.102
0.05	0.866	0.60	1.099
0.10	0.944	0.65	1.017
0.15	1.144	0.70	1.111
0.20	1.103	0.75	1.117
0.25	1.202	0.80	1.152
0.30	1.166	0.85	1.265
0.35	1.191	0.90	1.380
0.40	1.124	0.95	1.575
0.45	1.095	1.00	1.857
0.50	1.122		

DANE

Rozwiążanie:

$$La = b \quad \text{gdzie}$$

$$L = \begin{bmatrix} 21 & 10.5 & 7.175 & 5.5125 \\ 10.5 & 7.175 & 5.5125 & 4.51666 \\ 7.175 & 5.5125 & 4.51666 & 3.85416 \\ 5.5125 & 4.51666 & 3.85416 & 3.38212 \end{bmatrix}$$

$$a = [a_1, a_2, a_3, a_4]^T$$

$$b = [24.1180, 13.2345, 9.46836, 7.55944]^T$$

$$a = [0.5747, 4.7259, -11.1282, 7.6687]^T$$

$$\text{cond}(L) = \|L\| \|L^{-1}\| \doteq 22000$$

duża !!!

Trudne rozwiązywanie
(niestabilne)

Dodaj do "b"

$$[0.01, -0.01, 0.01, -0.01]^T$$

Rozwiążanie

$$a = [0.7408, 2.6825, -6.1538, 4.4550]^T$$

"Zupełnie inne".
