Wyznaczyć  $a_1, a_2, a_3$  aby zminimalizować

$$E = \left[ \int_{-1}^1 [a_1 + a_2 x + a_3 x^2 - f(x)]^2 dx \right]^{1/2}$$

Rozwiążanie:

$$\hat{f} = 7.3301079x^2 - 2.2158961x - 0.98132527$$
